OFFER & PRICING STRATEGY · INDIA · INSTAGRAM-LED

Sell the engineer, not the code.

A demand read, a price, and a four-rung offer ladder for a paid live workshop that teaches marketers to build AI agents they actually own — positioned against the flood of n8n and "agent API" courses currently running on Meta.

PREPARED 8 AUG 2026 MARKET INDIA (₹) CHANNEL INSTAGRAM PAID
DELIVERY CAPACITY 40+ HRS/MO

THE CALL

Marketing Engineering — but the workshop sells an outcome, not an argument

You asked whether to lead with *"why coding for marketing agents"* or with *marketing engineering*. Go with marketing engineering, and drop the "why coding" framing from anything a cold buyer sees.

The reason is blunt: **coding is the objection, not the promise.** Your buyer self-identifies as non-technical. An ad that leads with code filters out the exact people most likely to convert, and a "why" headline asks a scroller to sit through an argument before they know what they get. "Why coding" is the case you make on slide three, once they are already in the room and already convinced they want the outcome.

Marketing engineering, by contrast, gives you a category with real tailwind behind it and an identity people want to claim. It also gives you a defensible enemy — rented no-code automation — which is what separates you from every competitor ad in the feed.

FRONT-END PRICE **₹499** Split-test ₹999 in week three	HIGH-TICKET BACKEND **Yes** But never pitched inside the workshop	MODELLED VALUE / BUYER **₹2,064** 90-day, across all four rungs
DEMAND VERDICT **Validated** Created demand, not search demand		

QUESTION ONE

Is there demand for this?

Yes — and the strongest evidence is not interest in AI agents, which is saturated. It is the labour market putting a title and a salary on the exact skill you are teaching.

SIGNAL	EVIDENCE	WHY IT MATTERS TO YOUR OFFER	CONFIDENCE
A title now exists	"Marketing Engineer" became a breakout Google search term after the role was introduced in mid-2026.	You are naming something people are already searching for a name for. That is the cheapest kind of positioning.	STRONG
Hiring is compounding	GTM Engineer openings went from 16 (Dec 2024) to 402 (May 2026) — over 20×. LinkedIn listed 3,000+ GTM engineering roles in Jan 2026, up from ~1,400 six months earlier.	Career proof is the highest-converting argument in the Indian paid-workshop market. This is your credibility slide.	STRONG
The skill is paid	Median advertised base of $127,500 across ~1,000 GTM engineering postings; seniors $184K–$252K. In India, n8n/agent freelancers bill ₹15,000–25,000 per workflow and ₹50,000–2L/month retainers.	The India numbers are what justify a ₹25,000 cohort and a ₹75,000 done-with-you tier. Lead with those, not the US salaries.	STRONG
Non-developers are already building	~63% of vibe-coding users have no coding background (Feb 2026 tracker analysis).	Kills the "marketers won't do this" objection before you have to argue it.	STRONG
The incumbent has a soft belly	n8n takes 15–20 hours of learning before most users finish their first real workflow, and by benchmark is *not* a true no-code tool for non-technical marketers.	This is your entire wedge. Every competitor ad on Meta is selling that learning curve. See positioning.	STRONG
People pay for adjacent workshops	Skill Nation has run ₹99–₹299 live workshops to 200,000+ students with high-ticket backends. Comparable AI-ad workshops sell at $97–$197 globally.	The funnel shape is proven in your market. You are not inventing a mechanism, only a category.	STRONG
Search demand in India is thin	No meaningful India-specific search volume for "marketing engineer" or coded marketing agents yet; the paid landscape is dominated by "AI automation agency" and n8n offers.	Treat this as an **interruption** play. Instagram is the right channel; do not expect SEO or organic search to carry it for 12+ months.	DIRECTIONAL

WHAT THIS MEANS

Demand for the *capability* is validated and rising fast. Demand for the *category name* does not exist yet in India — you have to create it in the ad. That is a good trade: category creators get pricing power and no direct price comparison, which is exactly what you want given how crowded the n8n end of the market is.

QUESTION TWO

How to position against the Meta flood

Every competitor is selling the same thing: rented automation, taught as a tool, sold as income. You differentiate on ownership — and you attack the learning curve they are quietly charging for.

The wedge

The offers you are competing with teach n8n, Make, or a wrapper around an agent API. All three share a structural weakness: **the thing the student builds does not belong to them.** It lives in someone else's account, bills per execution, and caps out. And the tool everyone is teaching takes 15–20 hours to produce a first working workflow — which means most of those buyers never ship anything, and the workshop's promise quietly fails.

Your counter-position writes itself. Not "learn to code." Instead: **describe it in English, own the repo, run it for API cents, no platform in the middle.**

PILLAR 1

You own it outright

What the student walks out with is a repository they keep, not a workflow sitting in a vendor's account. It cannot be deprecated, repriced, or rate-limited out from under them.

Answers: "what happens when the tool changes?"

PILLAR 2

₹0 a month to run

No seat fees, no per-task billing, no execution caps. Agents run on API usage measured in paise. Contrast this against the ₹2,000–15,000/month stack the buyer is already paying for.

Answers: "is this cheaper than what I have?"

PILLAR 3

It is becoming a job title

Marketing Engineer and GTM Engineer postings are compounding — 20× in two years. In India the same skill bills ₹15,000–25,000 per project and ₹50,000–2L monthly retainers.

Answers: "what does this do for my income?"

PILLAR 4

You never write a line

You write the brief in English. The model writes the code. You review, deploy, own. This is the sentence that removes the fear — and it must appear early on the landing page, every time.

Answers: "but I'm not technical."

Naming

Give the category a name and the method a name. The category is what makes the buyer want to be something; the method is what makes your version feel proprietary rather than generic.

- **Category:** Marketing Engineering. Use it as an identity throughout — "become the marketing engineer on your team," not "learn marketing engineering."
- **Product:** The Marketing Engineer Workshop. Plain, searchable, and it puts the identity in the product name.
- **Method:** The Owned-Agent Method. Three named beats — *Brief it. Build it. Own it.* — so the mechanism is repeatable and quotable in ads.

Working promise line, to test as your landing-page H1:

> HEADLINE CANDIDATE
>
> **In 3 hours, ship one marketing agent you own outright. No n8n. No monthly tool bill. No code you have to write.**

On the "no upsells" promise from the reference page

The workshop you shared leads on *no upsells*, and that tells you something real: this market is upsell-fatigued, because ₹99 workshops that turn into 90-minute pitches have trained people to expect a bait-and-switch. But you cannot promise "no upsells" and run the backend that makes this business work.

> DON'T COPY THIS
>
> Do not adopt "no upsells." It is a promise you would have to break by rung two, and breaking it in a market this suspicious is more expensive than never making it.

> USE INSTEAD
>
> **Radical transparency plus a hard outcome guarantee.** Two lines: *"There is exactly one thing I'll offer you at the end. I'll tell you what it is in the first two minutes, so you can stop waiting for the catch."* And: *"You leave with a deployed, working agent — or I refund you in full."* The second is a stronger trust signal than "no upsells" ever was, and it is fully compatible with a backend.

QUESTION THREE

What to charge

₹499 for the workshop. Not ₹99, and not ₹1,999 — with a deliberate test at ₹999 once your baseline is stable.

Why ₹499

- **₹99 is a trap at your ad costs.** Instagram in India runs roughly ₹180–320 CPM for business and marketing interest pools in metros. At a realistic 1.5% click rate and 5–8% landing-page conversion, your cost per buyer lands around ₹200–400. A ₹99 ticket cannot pay for that even with a bump, so you would be buying customers at a loss from day one — and buying the wrong ones.
- **Price filters the room, and the room is the product.** Financial commitment is the strongest known lever on show-up rate; offers without real deposits see three to four times the no-show rate. Your backend revenue is a function of who actually attends, not who registers.
- **₹499 is still impulse.** It clears the "less than dinner" threshold that makes the Indian workshop model work, while screening out the freebie-adjacent audience that never converts on anything.
- **It gets you to a defensible AOV.** With the order bump and the one-time offer described below, ₹499 becomes roughly ₹865 average order value — comfortably above a ₹300 acquisition cost.

> TEST IN WEEK THREE
>
> Given your 40+ hrs/month capacity and a genuine high-ticket backend, **₹999 may well win on total funnel value** even though it will cut front-end buyers by roughly 40%. A ₹999 room is materially more serious, and serious rooms convert to ₹25,000 cohorts at multiples of the rate a ₹499 room does. Run it as a price-only split test on the same page, and judge it on **90-day revenue per 1,000 landing-page visitors** — never on cost per purchase, which will always favour the cheaper ticket and mislead you.

What goes inside the ₹499

Bonuses here have one job: kill the fear that they will not be able to finish. Do not stack value for the sake of a bigger crossed-out number — every bonus below removes a specific reason people fail to ship.

INCLUDED	WHAT IT IS	THE FEAR IT REMOVES
The live build room	3 hours, screens shared, everyone builds the same agent at the same time.	"I'll watch it and never actually do it."

INCLUDED	WHAT IT IS	THE FEAR IT REMOVES
The Starter Repo	Pre-wired project, keys template, deploy config. Clone and go.	Setup friction — the single biggest reason people quit in minute ten.
The Brief Library	12 fill-in-the-blank English specs for real marketing agents.	"I won't know what to build next."
The Guardrails Sheet	Cost caps, dry-run mode, and how to stop an agent emailing your live list by accident.	"What if it does something expensive or embarrassing?"
7-day replay	Recording access for a week. Lifetime access is the upsell.	"What if I miss part of it?"

QUESTION FOUR

Upsells, cross-sells, and the high-ticket question

Yes, build the high ticket — you have the capacity and the market pays for it. No, do not pitch it inside the workshop. Those two answers are not in tension; the sequencing is the whole trick.

> THE MISTAKE TO AVOID
>
> Do not pitch a ₹75,000 program on a ₹499 cold-traffic call. Two things break. First, ₹499 → ₹75,000 in a single sitting converts at near zero — the trust gap is too wide to close in three hours with strangers. Second, and more expensively: a hard pitch inside the workshop generates "is this a scam" comments on your Instagram creative, and comment-section sentiment feeds directly back into Meta delivery. You raise your own CPM. The workshop has to be genuinely complete on its own, or the ad account degrades.

The ladder

Four rungs. Rungs one and two are sold by the funnel; rungs three and four are sold to a list that has already seen you deliver.

01

The Marketing Engineer Workshop **₹499**

SOLD BY INSTAGRAM ADS, DIRECT   TARGET 100% OF ENTRIES

LOAD 3 HRS × 2 RUNS/MO

Three hours live. Everyone ships one working agent. This is an acquisition product — it pays for its own traffic and nothing more. Judge it on buyers and show-up rate, not margin.

01a	**Order bump — The Agent Vault** **+₹299** SOLD AT CHECKOUT, ONE CLICK TARGET 30–35% TAKE RATE LOAD NONE 25 more production-ready agent specs: competitor ad-library monitor, review-mining agent, weekly performance report, WhatsApp lead qualifier, SEO brief writer, creative-fatigue watcher. Pure margin, zero delivery, and it makes your ₹499 ticket pay for its own ads.
01b	**One-time offer — Lifetime + Playbook** **₹1,499** SOLD ON POST-CHECKOUT PAGE TARGET 15–20% LOAD LIGHT COMMUNITY MODERATION Lifetime recordings, the full Marketing Engineer Playbook, the context-file and prompt templates, and 30 days of Discord or WhatsApp access. Priced at 3× the front end, which is where first upsells convert best.
02	**Agent Build Sprint** **₹4,999** SOLD 5–7 DAYS POST-WORKSHOP, BY EMAIL + WHATSAPP TARGET 4–8% OF BUYERS LOAD ~4.5 HRS/MO A 14-day guided build with three group calls. They ship three agents against their own real work. This rung exists to convert momentum before it decays, and to identify who is serious enough for rung three.
03	**Marketing Engineer Certification** **₹24,999** SOLD TO WARM LIST, COHORT LAUNCHES TARGET 2–3% OF BUYERS LOAD ~12 HRS/MO Six weeks, cohort-based, ending in a portfolio of deployed agents and a credential. This is the career play, and it is priced deliberately below the ₹35,000–80,000 band that Indian AI bootcamps occupy — same outcome, visibly better value, no university overhead to justify.
04	**Done-With-You Agent Stack** **₹75,000** SOLD BY APPLICATION ONLY TARGET 0.5–1%, CAPPED AT 3–4/MO LOAD ~18 HRS/MO You build their first three agents alongside them. For agency owners and founders who want the system, not the skill. The ROI argument is already in the market: an n8n setup of 3–5 connected apps quotes ₹25,000–60,000, and custom builds run ₹80,000–2.5L — so ₹75,000 for an owned stack plus the ability to build more is a straightforward comparison.

Cross-sells — parallel, not up

These are not rungs. They are sold sideways to segments the ladder does not serve, which matters given you have a mixed room of freelancers, in-house marketers, and founders.

Portfolio & Interview Kit — ₹999 Case-study template, résumé lines, and how to present agent work in an interview. For the in-house segment chasing the title rather than clients.	**Agent Ops Pack — ₹1,999** Monitoring, logging, cost caps, error alerts, deploy scripts. Sold to anyone who has shipped one agent and is now nervous about it running unattended.
1:1 Architecture Audit — ₹4,999 60 minutes on their specific stack. High margin, and it is the best qualification mechanism you have for rung four.	**Build Club — ₹499/month** One new agent built live every month, plus the community. Start this early: recurring revenue is what makes rising Instagram CPMs survivable, and it is the most valuable asset on this page long-term.

THE MODEL

What this looks like at ₹1.5L/month in ad spend

One month, steady state, assuming ₹300 to acquire a workshop buyer. Treat this as a structure to pressure-test, not a forecast.

RUNG	PRICE	RATE	UNITS	REVENUE	ASSUMPTION RISK
Workshop	₹499	–	500	₹2,49,500	LOW — standard India IG math
Order bump	₹299	32%	160	₹47,840	LOW — 30%+ is the known benchmark
One-time offer	₹1,499	18%	90	₹1,34,910	LOW — 15%+ is the known benchmark
Build Sprint	₹4,999	5%	25	₹1,24,975	MEDIUM — depends on show-up rate
Certification	₹24,999	2%	10	₹2,49,990	HIGH — unvalidated
Done-With-You	₹75,000	0.6%	3	₹2,25,000	HIGH — unvalidated
Gross revenue	–	–	–	**₹10,32,215**	**on ₹1,50,000 spend**

FRONT-END ROAS

2.88×

₹4.32L on ₹1.5L — pays for its own traffic

BLENDED ROAS

6.9×

All four rungs, 90-day window

REVENUE / BUYER

₹2,064

Against ₹300 acquisition cost

YOUR HOURS

~40

At the ceiling of stated capacity

WHERE THIS MODEL IS FRAGILE

Two numbers carry **46% of the revenue** and are the least validated on the page: the 2% certification rate and the 0.6% done-with-you rate. Everything above them is ordinary low-ticket funnel math with published benchmarks behind it. Validate rungs three and four with one cohort each *before* you scale spend past ₹1.5L/month — otherwise you will be buying traffic against a backend that does not exist yet.

CAPACITY IS THE REAL CEILING

Done-with-you at three clients consumes roughly 18 of your 40 hours — nearly half your capacity for 22% of the revenue. It is the highest-status offer and the worst use of your time per rupee. Cap it hard at three or four, and make delegating or dropping it your first move the moment the certification cohort proves out.

CHANNEL

Instagram: five angles, and what actually stops the scroll

Your competitive set all runs the same creative — a talking head promising AI income. Your cheapest differentiation is visual: show the machine working.

ANGLE 1 · LEAD WITH THIS

"Stop learning n8n."

Twenty hours to your first workflow, versus twenty minutes to your first agent. Names the competitor set directly, which is the strongest pattern-interrupt available to you in a feed where every other ad is selling that exact learning curve.

Highest expected scroll-stop. Test first.

ANGLE 2

"I cancelled ₹38,000/month of marketing tools."

Screen-record the cancellation screens, then the agents that replaced them. Concrete, verifiable, and it reframes your ₹499 against a monthly bill instead of against another course.

Best angle for founders and ecom operators.

ANGLE 3

"Your automation lives in someone else's account."

The ownership argument, stated as a problem they had not thought about. Works because it creates a new objection to the thing they were about to buy from a competitor.

Strong for anyone already burned by a tool price hike.

ANGLE 4

The 6am report. No voiceover.

Pure screen recording: the agent pulls competitor ads, writes the performance summary, drops it in Slack before anyone is awake. No face, no claims, no income promise. Just the thing working.

Usually the cheapest cost per purchase in this category.

ANGLE 5

"I'm a marketer. I don't code. I shipped six agents last month."

The identity angle, carrying the Marketing Engineer title and the hiring data. Sells the person they want to become rather than the tool they will use.

Best angle for the in-house and career segment.

CRAFT NOTES

Execution rules

Reels placements run 20–40% cheaper on CPM than feed — build 9:16 first. Refresh four to six creatives a month; fatigue is fast in a pool this saturated. And moderate comments aggressively: unanswered "scam?" comments compound, depress click-through, and raise your CPM directly.

FUNNEL TEST WORTH RUNNING EARLY

Compare **direct-to-checkout** against **WhatsApp opt-in, then checkout**. In India the WhatsApp-intermediated path usually costs more per buyer but lifts show-up rate substantially — and show-up rate is the input to every backend rung in the model above. If WhatsApp lifts attendance by even fifteen points, it likely wins on 90-day value despite the worse front-end numbers. This is the highest-leverage test on the page after price.

SEQUENCING

First 90 days

Build the ladder in the order that lets each rung fund and validate the next. Do not launch rungs three and four until you have testimonials from rungs one and two.

DAYS 1–14 · PROVE THE FRONT END

Landing page, three creatives, workshop at ₹499 with the order bump only

Spend ₹2,000–3,000/day. You are buying two things: a reliable cost-per-buyer number, and thirty named testimonials with screenshots of agents people actually shipped. Do not add rungs until the cost per buyer is stable and you know your show-up rate.

DAYS 15–45 · ADD MARGIN, THEN TEST PRICE

Introduce the ₹1,499 one-time offer and the ₹4,999 Build Sprint. Split-test ₹999.

The one-time offer is what takes you from break-even to profitable on the front end. The Sprint is your first real signal about who will pay more. Run the ₹999 price test only once your ₹499 baseline is stable enough to compare against, and scale spend to ₹3,000–5,000/day on whichever wins on revenue per 1,000 visitors.

DAYS 46–90 · OPEN THE BACKEND

Launch the ₹24,999 certification cohort to your accumulated buyer list. Open done-with-you applications, capped at three.

By now you have several hundred buyers who have seen you deliver, which is the only audience a ₹25,000 offer converts against. Run one cohort before you scale spend further — its real conversion rate is the number that determines whether the model on this page holds.

ONGOING

Start the ₹499/month Build Club as soon as you have 200 buyers

Recurring revenue is the hedge against rising Instagram costs, and it is the only rung here that compounds rather than resetting to zero every month.

WATCH LIST

What will most likely go wrong

- **The word "coding" leaks into an ad.** The single most likely self-inflicted wound. Enforce it as a rule across every creative and every landing-page revision: the promise is the agent and the ownership; code is only ever described as something the model does on your behalf.
- **You overpromise on what three hours produces.** One deployed agent, honestly delivered, beats six half-built ones. Your refund guarantee makes this a financial risk, not just a reputational one — scope the workshop to something you can genuinely get a non-technical room across the line on.
- **Creative fatigue outruns your production.** Budget for four to six new creatives a month from the start. In a saturated pool, a winning ad has a short life and the drop-off is sudden rather than gradual.
- **Backend rates come in below model.** Certification at 2% and done-with-you at 0.6% carry nearly half the revenue and neither is validated. If certification lands at 0.8% instead, blended ROAS falls to roughly 4.7× — still viable, but it changes how hard you can push spend. Know that number before you scale.
- **Capacity gets consumed by the wrong rung.** Done-with-you will feel like the most flattering work and will quietly eat half your month. Cap it in writing before you sell the first one.
- **Employer overlap.** A paid workshop teaching agents built on top of email and CRM APIs sits close to your employer's product domain. Worth clearing internally before you spend on ads — the insider

credibility is a genuine asset in your positioning, but it is worth more with permission than without it.
